

IN THE CLAIMS :

Amend Claims 1, 2, 6, 10-17 and 20 as follows:

1. (Currently Amended) Device to transmit power from a power system (28) of a working machine (1) to one or more moving parts (25, 26) of a tool (3-5) replaceably attachable to a first part of the working machine which is in the form of a beam, ~~or such,~~ wherein it comprises comprising

a first element (7) arranged on the working machine and driven by its power system,

a second element (11) movably ~~attached~~ coupled either directly or through at least one interconnecting component to the tool (3-5), and

means (8, 12) arranged to mechanically interconnect both of said elements (7, 11) in the absence of hydraulics so that a displacement of the first element (7) via the working machine's power system brings about a movement of the second element ~~on~~ (11) and the tool (3-5).

2. (Currently Amended) Device ~~according to claim 1~~ to transmit power from a power system (28) of a working machine (1) to one or more moving parts (25, 26) of a tool (3-5) replaceably attachable to a first part of the working machine which is in the form of a beam, comprising

a first element (7) arranged on the working machine and driven by its power system,

a second element (11) movably coupled either directly or through at least one interconnecting component to the tool (3-5), and

means (8, 12) arranged to mechanically interconnect both of said elements (7, 11) so that a displacement of the first element (7) via the working machine's power system

brings about a movement of the second element (11) and the tool (3-5),

wherein said means (8, 12) for mechanical interconnection is arranged to automatically establish a mechanical interconnection of the first (7) and second (11) elements on attachment of the tool to the working machine's first part.

3. (Previously Presented) Device according to claim 2, wherein the means for mechanical interconnection comprise engagement means (8, 12) on the first and second elements, which are arranged to co-operate with each other to automatically establish power-transmitting engagement with each another on attachment of the tool to said first part.

4. (Previously Presented) Device according to claim 3, wherein one of the engagement means is formed from a projection (12) arranged on the first element and the other engagement means is formed from a recess (8) arranged on the second element and arranged to receive the projection on moving the tool and the first part together.

5. (Previously Presented) Device according to claim 2, wherein the second element (11) is displaceably arranged in a track on the tool via power transmission from the first element (7).

6. (Currently Amended) Device according to claim 1, additionally comprising elements ~~wherein it comprises an arrangement~~ (13, 16, 17) for interconnection of the second element (11) with said moving parts (25, 26) of the tool to transmit a movement of the second element to a movement of these tool parts.

7. (Previously Presented) Device according to claim 1, wherein it comprises a pressure medium cylinder (9) arranged on said first part of the working machine near an

attachment arrangement for the tool, and connected to the working machine's power system (28), and said first element (7) is formed from, or connected to, a part of said cylinder that is moveably arranged relative to the first part.

8. (Previously Presented) Device according to claim 7, wherein the first element (7) is formed from an end of a piston rod of the cylinder which is distant from the piston.

9. (Previously Presented) Device according to claim 7, wherein the pressure medium cylinder (9) is a hydraulic cylinder connected to the working machine's power system (28) that is in the form of a hydraulic system.

10. (Currently Amended) Device according to claim 1, ~~wherein said second~~
additionally comprising element (11) is arranged to operate a drive unit coupled to the
movable parts (25, 26) of the tool to set the parts (25, 26) of the tool into motion relative to
a body (24) of the tool, and

said second element (11) is coupled to the drive unit such that on displacement of
the second element (11) relative to the body (24) of the tool, the movable parts (25, 26) are
set in motion.

11. (Currently Amended) Device according to claim 10, wherein said second element (11) is connected to a ~~second~~ pressure medium cylinder (13) on the tool, which lacks a power supply through any pressure medium source to cause movement of the piston (14) of this ~~second~~ cylinder relative to a casing of the cylinder by movement of the first element (7).

12. (Currently Amended) Device ~~according to claim 11~~ to transmit power from a
power system (28) of a working machine (1) to one or more moving parts (25, 26) of a tool

(3-5) replaceably attachable to a first part of the working machine which is in the form of a beam, comprising

a first element (7) arranged on the working machine and driven by its power system,
a second element (11) movably coupled either directly or through at least one
interconnecting component to the tool (3-5),

means (8, 12) arranged to mechanically interconnect both of said elements (7, 11)
so that a displacement of the first element (7) via the working machine's power system
brings about a movement of the second element (11) and the tool (3-5),

a drive unit coupled to the movable parts (25, 26) of the tool to set the parts (25, 26)
of the tool into motion relative to a body (24) of the tool, wherein

said second element (11) is coupled to the drive unit such that on displacement of
the second element (11) relative to the body (24) of the tool, the movable parts (25, 26) are
set in motion, and connected to a pressure medium cylinder (13) on the tool, which lacks a
power supply through any pressure medium source to cause movement of the piston (14)
of this cylinder relative to a casing of the cylinder by movement of the first element (7),
and

the ~~second~~ pressure medium cylinder (13) is arranged to function as a pump to
drive one or more additional pressure medium cylinders (16, 17) arranged on the tool,
which are in pressure medium flow communication with the ~~second~~ cylinder.

13. (Currently Amended) Device ~~according to claim 6~~ to transmit power from a
power system (28) of a working machine (1) to one or more moving parts (25, 26) of a tool
(3-5) replaceably attachable to a first part of the working machine which is in the form of a

beam, comprising

a first element (7) arranged on the working machine and driven by its power system,
a second element (11) movably coupled either directly or through at least one
interconnecting component to the tool (3-5),

means (8, 12) arranged to mechanically interconnect both of said elements (7, 11)
so that a displacement of the first element (7) via the working machine's power system
brings about a movement of the second element (11) and the tool (3-5), and elements (13,
16, 17) for interconnection of the second element (11) with said moving parts (25, 26) of
the tool (3-5) to transmit a movement of the second element to a movement of these tool
parts (25, 26), wherein

the tool is a fork unit with the moving parts comprising forks (25, 26) that are
laterally displaceable along a frame (24), and

the interconnection ~~arrangement is~~ elements (13, 16, 17) arranged to transmit a
movement of the second element (11) to a movement of the forks.

14. (Currently Amended) Device according to claim 12, ~~wherein it comprises~~
additionally comprising two said additional pressure medium cylinders (16, 17) for each
driving a respective fork (25, 26) which constitute the movable parts each.

15. (Currently Amended) Device according to claim 14, wherein both of said
additional pressure medium cylinders (16, 17) have mutually interconnected pressure
medium chambers and means for interconnecting the same to make a movement of one
fork (25) dependent on a movement of the other fork (26).

16. (Currently Amended) Device according to claim 15, wherein said means

interconnect said additional pressure medium cylinders (16, 17) ~~are interconnected~~ to cause a displacement of the forks (25, 26) in opposite directions for separating or bringing them together relative to each other via movement of the second element (11).

17. (Currently Amended) Device according to claim 15, wherein said means interconnect both of said additional pressure medium cylinders (16, 17) ~~are interconnected~~ to cause a displacement of the forks (25, 26) in the same direction for simultaneous displacement thereof to one side or the other of a body of the tool via movement of the second element (11).

18. (Previously Presented) Device according to claim 3, wherein the second element (11) is displaceably arranged in a track on the tool via power transmission from the first element (7).

19. (Previously Presented) Device according to claim 4, wherein the second element (11) is displaceably arranged in a track on the tool via power transmission from the first element (7).

20. (Currently Amended) Device according to claim 19, ~~wherein it comprises an arrangement~~ additionally comprising elements (13, 16, 17) for interconnection of the second element (11) with said moving parts (25, 26) of the tool to transmit a movement of the second element (11) to a movement of these tool parts.
